EPLAN ELECTRICAL DESIGN PROJECT PORTFOLIO

Med Maamoun MAROUANI
Industrial Electronics · Automation · Electrical Design

This portfolio presents selected EPLAN drawings covering PLC inputs, electrical cabinet layouts, control circuits, sensors, pneumatic actuation, controller wiring, and CNC motor drives. The notes describe what is visible in each drawing.

Digital Input Module Wiring

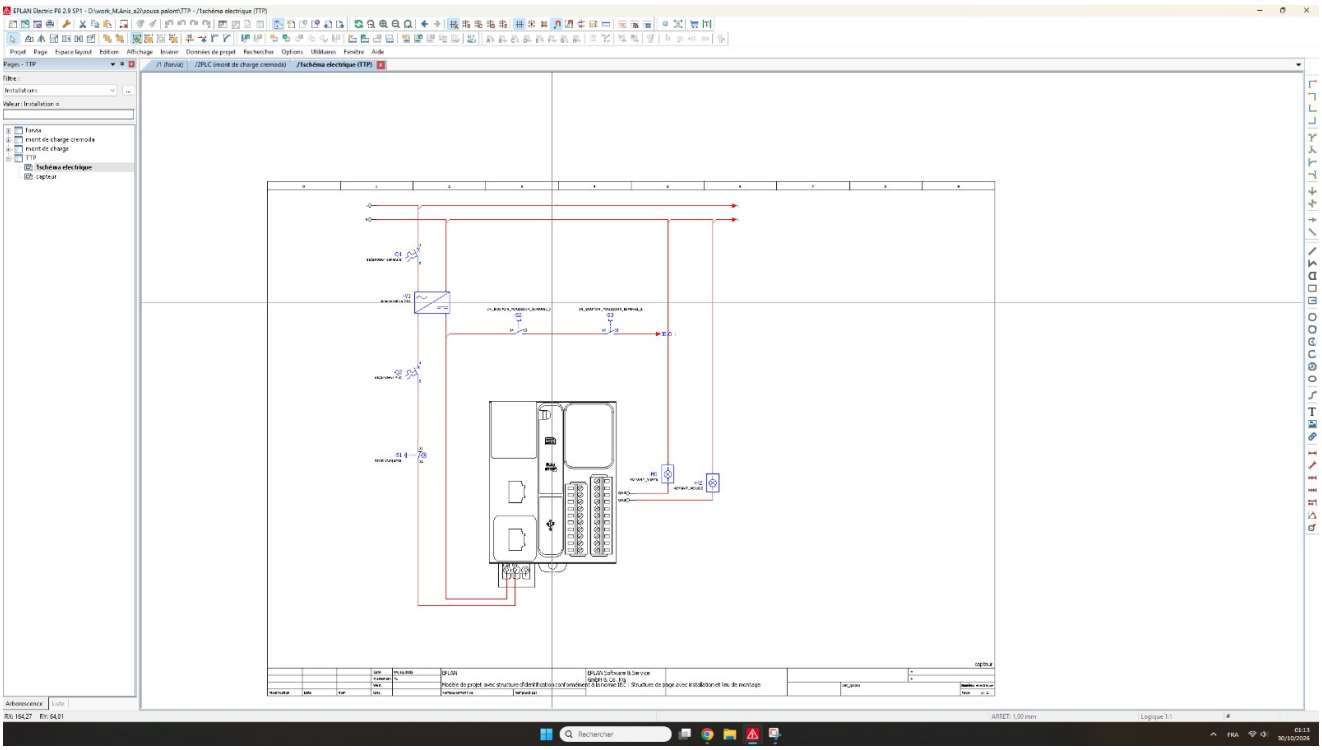

Project overview

This drawing shows how field signals can be connected to a PLC digital input module. It helps identify the input channels and follow the signal connections.

General architecture

Field signals → PLC digital input module

Electrical Cabinet Layout — Pyrolysis Unit

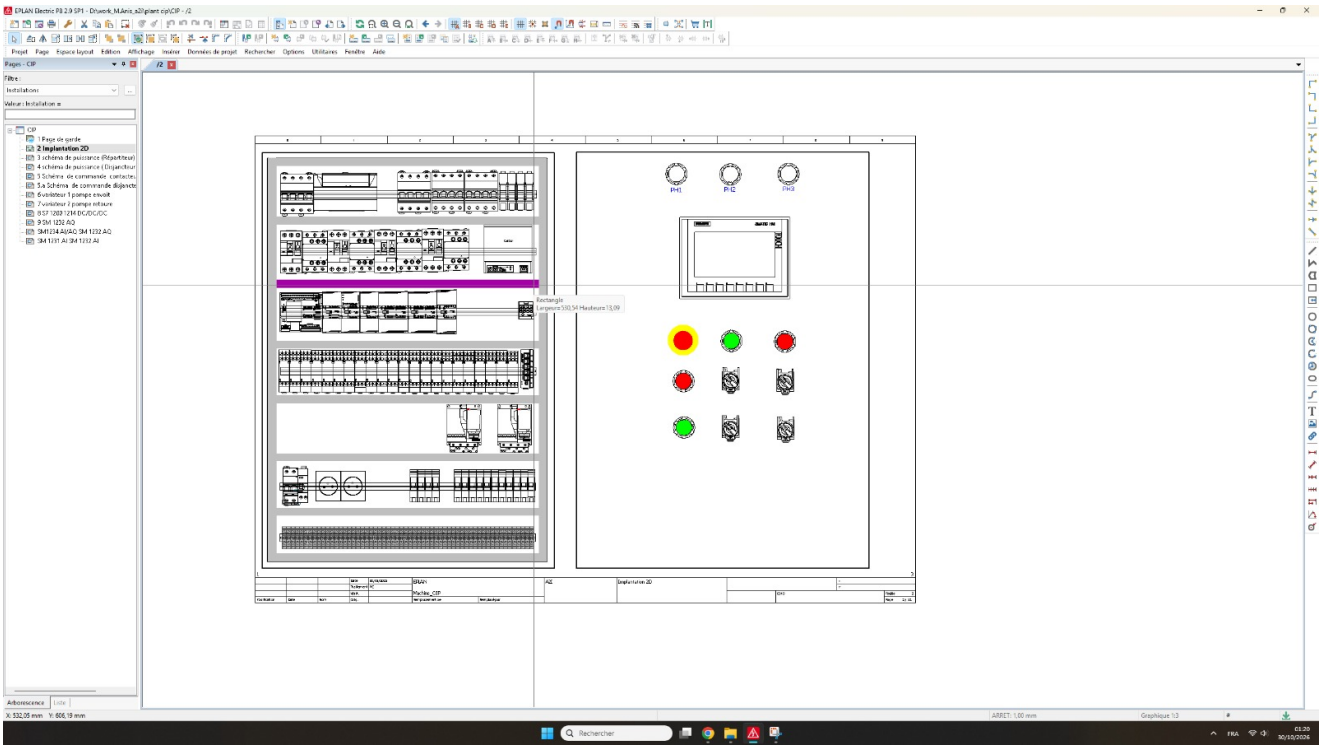

Project overview

This layout presents the cabinet equipment and front-panel devices for a 200-litre pyrolysis unit. It helps organise component placement before assembly.

General architecture

Operator panel and electrical cabinet components

Machine Electrical Cabinet Layout

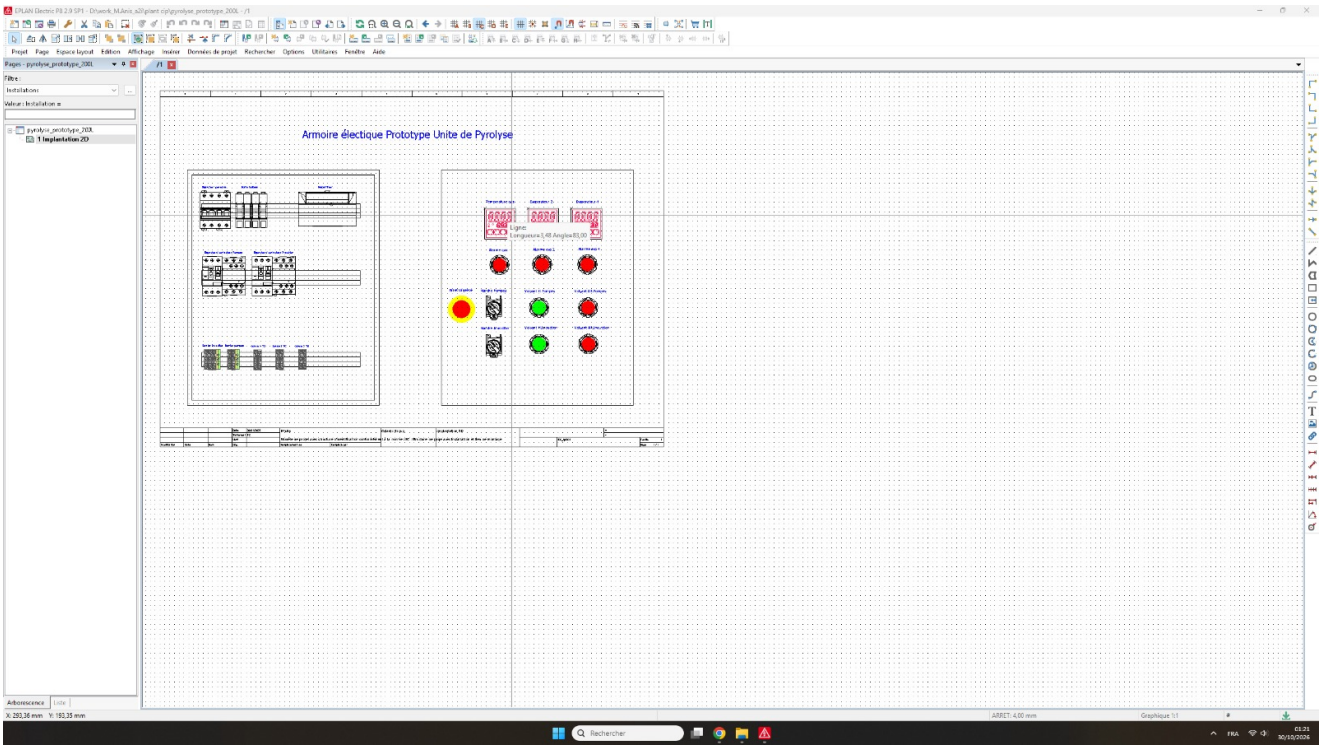

Project overview

This drawing shows the arrangement of electrical components and operator devices for a machine cabinet. It supports component identification and panel organisation.

General architecture

Cabinet components → Operator panel → Machine connections

TTP — Electrical Control Schematic

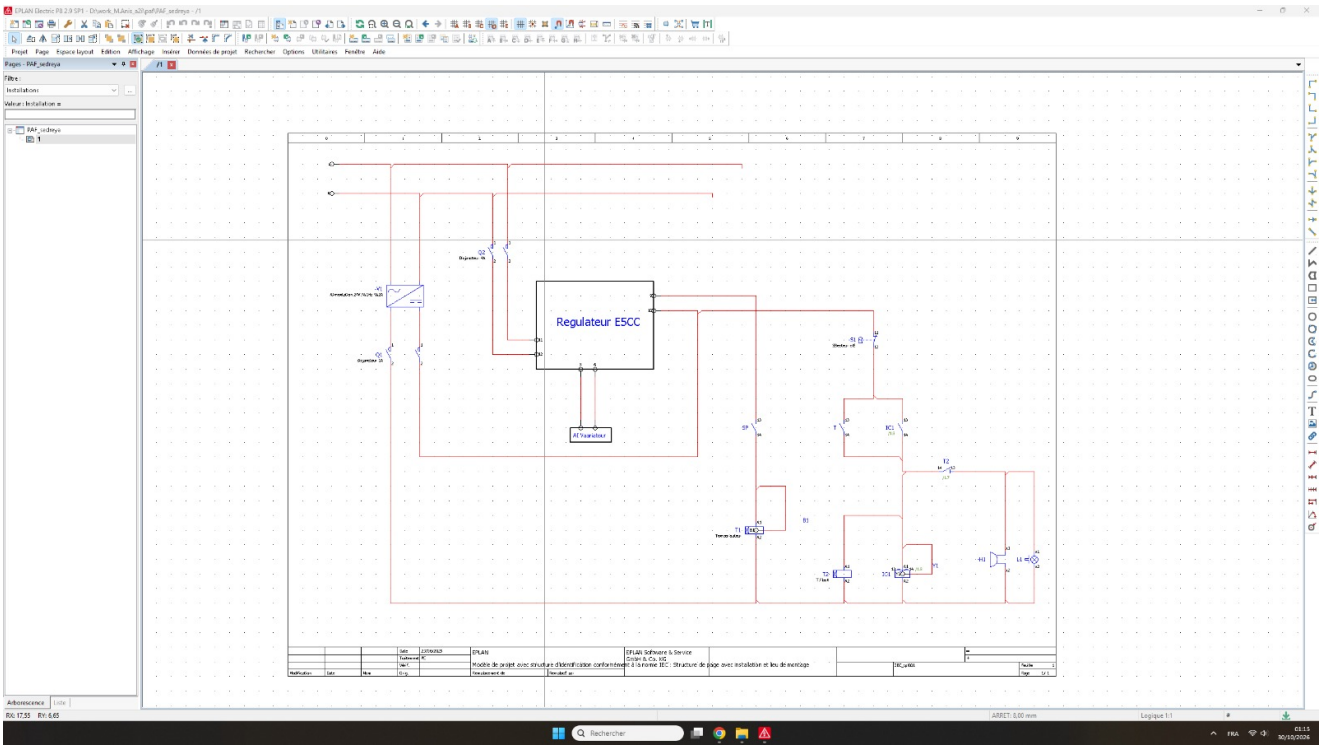

Project overview

This schematic shows electrical connections between control components and related devices. It can be used as a reference when following circuits and understanding the control arrangement.

General architecture

Power and protection → Control circuit → Connected devices

TTP — Sensors and Pneumatic Actuation

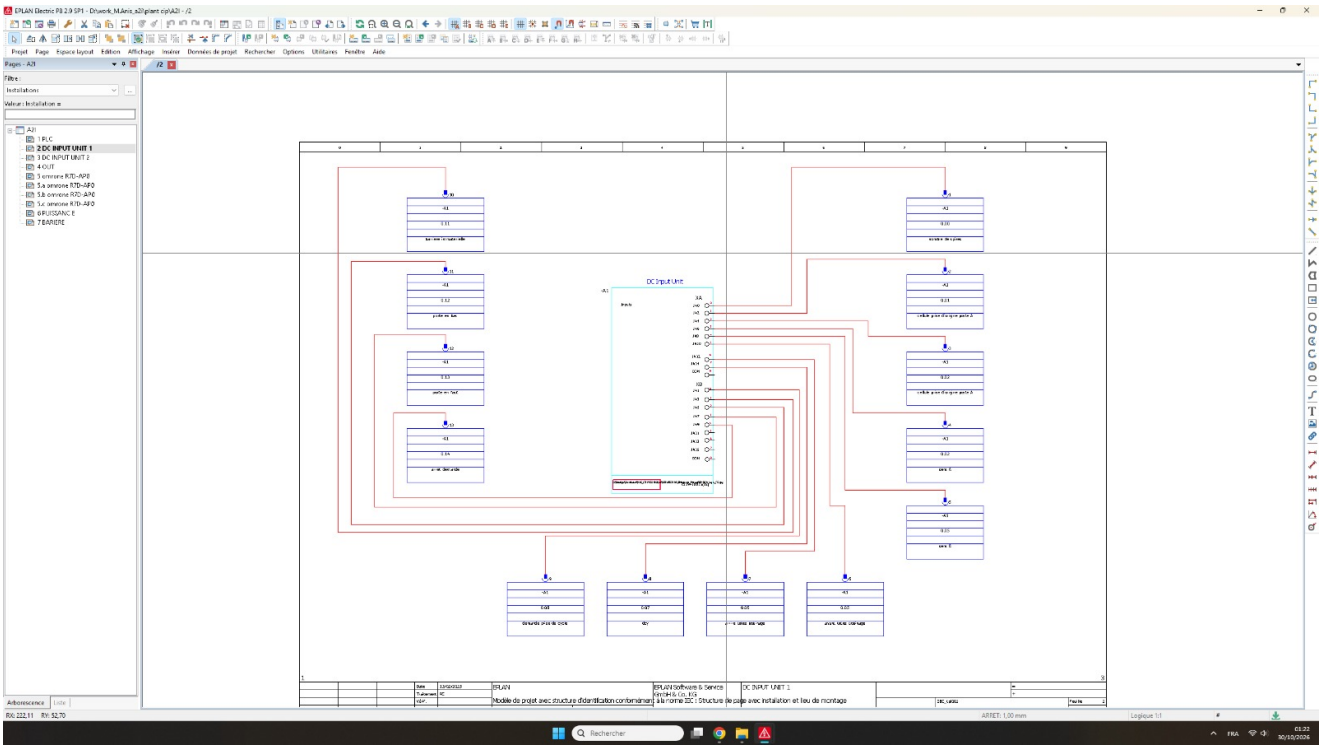

Project overview

This page combines sensor connections with pneumatic actuation. Sensor signals are used by the control system, while a directional valve controls air to the cylinder.

General architecture

Sensors → Control system → Directional valve → Pneumatic cylinder

E5CC Controller Circuit

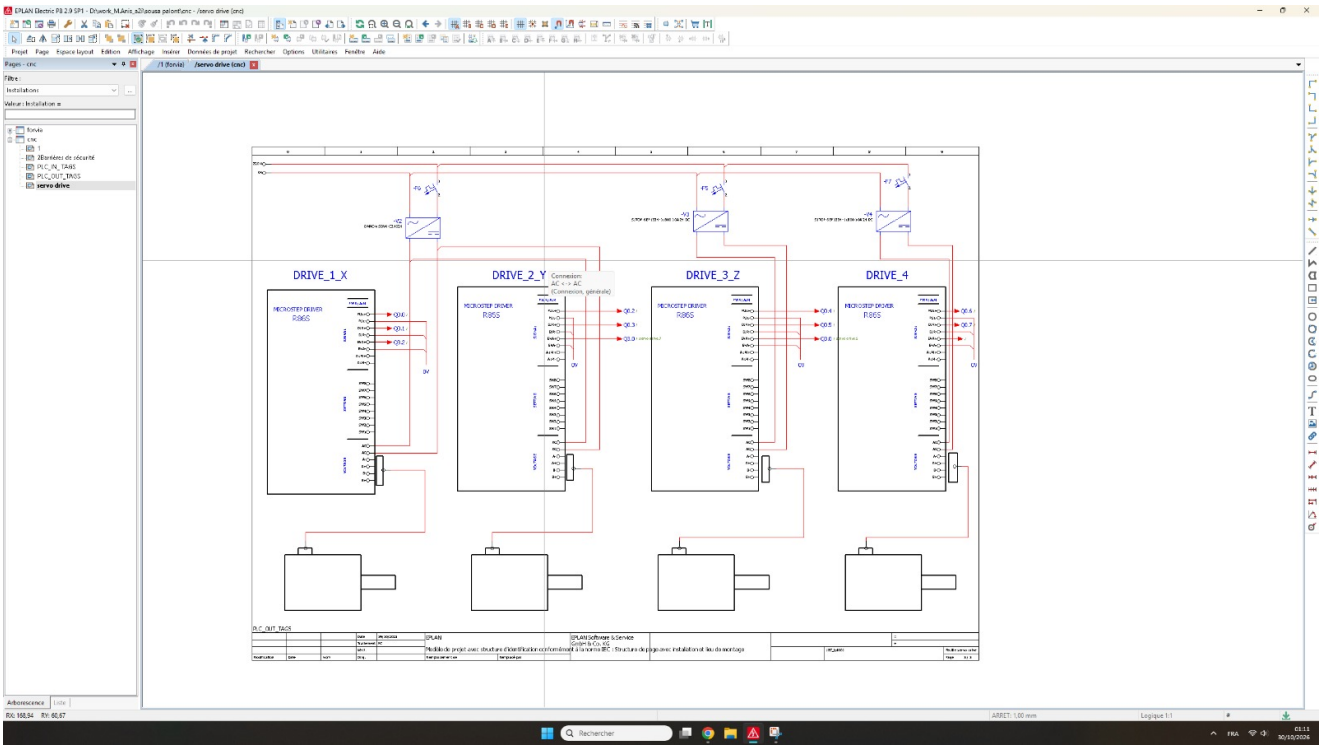

Project overview

This drawing shows an E5CC controller within an electrical control circuit, with associated connections and control devices. The exact controlled process depends on the application.

General architecture

Controller input → E5CC controller → Control output / relay

CNC Machine — Four Motor Drives

Project overview

This drawing presents four motor drives associated with CNC machine axes. It provides a view of the drive wiring and the electrical connections used to command machine movement.

General architecture

CNC controller → Motor drives → Axis motors → Machine movement
